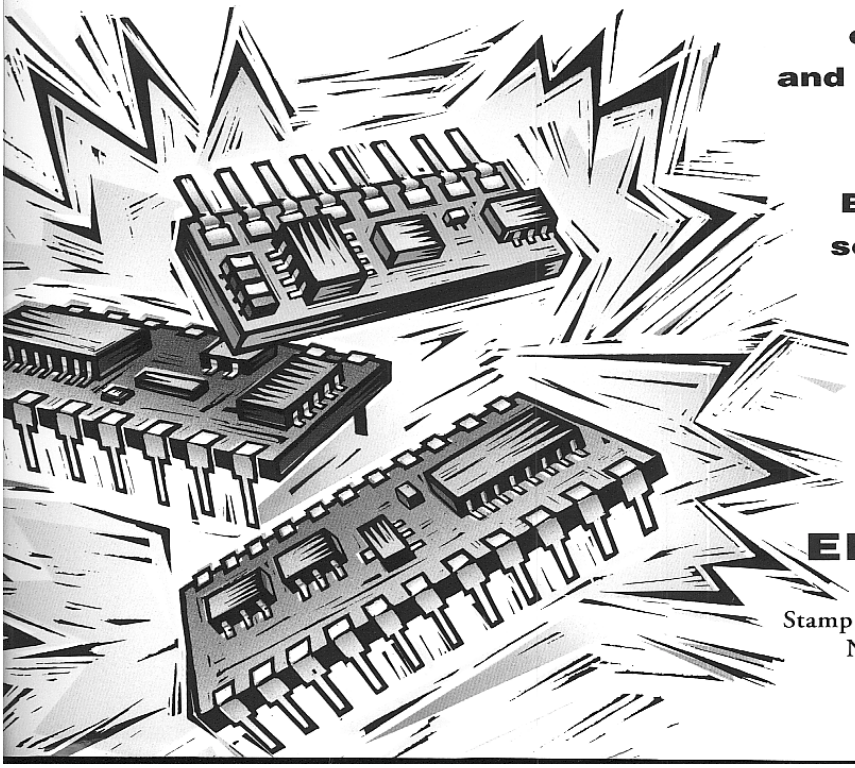
TAB The Electronics Authority

CD-ROM

PROGRAMMING AND CUSTOMIZING THE BASIC STAMP COMPUTER



Includes 12 complete BSI and BSII projects

CD includes BASIC STAMP software tools

SCOTT EDWARDS

Founder of
Stamp Applications Column,
Nuts & Volts Magazine

Jameco Part number 154667

CONTENTS

1. Introduction ***1***

Requirements *2*
Microcontrollers *2*
Programming Fundamentals *4*
Programming Languages *5*
The BASIC Programming Language *7*

2. Introducing the BASIC Stamps ***11***

What is a BASIC Stamp? *12*
Stamp Hardware: Overview *12*
Stamp Hardware: Detailed Tour *13*
PBASIC Interpreter Chip (U1) *13*
Program Memory (U2) *15*
Programming Connection *16*
Power Supply (U4) *17*
Reset Circuit (U3) *17*
BS1 or BS2: How to Choose *17*
Stamps and PICs *18*
The Future of the Stamps *19*

3. Electronic Foundations ***21***

Electricity *22*
Batteries and Circuits *23*
Resistance *23*
Electrical Properties, Measurements, and Units *24*
Ohm's Law: a Quick Preview *24*
Electronic Components and Symbols *26*
Batteries and Power Supplies *26*
Resistors *26*
Potentiometers ("Pots") *27*
Capacitors *27*
Diodes and LEDs *29*
Transistors *29*
Integrated Circuits *30*
Other Components *31*
Combining Symbols into Schematics *32*

4. Building Electronic Circuits ***35***

Plug-in Prototyping Boards *36*
Crimp Connectors *38*
Wire Wrapping *39*

VI CONTENTS

Soldering *40*
Printed Circuit Boards *43*
Tools and Test Equipment *45*
Summary of Construction Techniques *46*

5. Getting Started with Stamps ***47***
What You'll Need *48*
Connecting the Stamp Hardware *48*
Installing and Starting the Stamp Software *49*
Stamp Software Options and Functions *51*
The Programming Process *52*
Working with Stamp Program Files *53*
Where Do I Go from Here? *53*

6. BASIC Stamp Boot Camp, Part 1 ***57***
Variables: Storage Spaces for Numbers *58*
Variables Have Fixed Sizes *59*
Name Those Variables *60*
Constants are Unchanging Values *61*
Summary *62*
Labels, Gotos and Loops *62*
For...Next, Another Kind of Loop *63*
Getting in Step *64*
Making Decisions with If...Then *65*
Combining If...Then Conditions *66*
Multiple Possibilities with Branch *67*
Looking Up Values from a List *69*
Another Look at a List: Lookdown *69*
Create Your Own Instructions with Gosub *70*
Passing Data to Subroutines *71*
At Ease! End of Boot Camp Part 1 *72*

7. BASIC Stamp Boot Camp, Part 2 ***73***
Seeing the World through an Input *74*
Where Does Input Come From? *75*
Changing the World through an Output *75*
Deeper Meanings of "Input" and "Output" *76*
Output Bit *76*
Direction Bit *77*
Input Bit *77*
Summing up the I/O Trio *78*
Variations on an LED Blinker *78*
Controlling the LED Blinker *79*
Final Example: Dial-controlled Timer *80*
Comments *80*
Formatting *83*
The Timer Programs *84*
Boot Camp Graduation *85*

8. Magic Message Machine ***87***
Persistence of Vision (POV) *88*

Putting POV to Work *88*
A Different Spin on POV *89*
Initial Experiments with POV *89*
Displaying a Text Message *91*
Modifications and Photography *93*
Parts List *95*

9. Intelligent Traffic Signal Simulation ***97***
Traffic School *98*
Stoplight Circuit *99*
Construction and Modifications *101*
Parts List *101*

10. Robotic Bug with Whisker Sensors ***103***
Motors, Ready-to-roll *104*
Modifying Servos to Drive Wheels *105*
Building and Programming the Robot *107*
Adding Collision-detection Sensors *108*
Modifications and Improvements *111*
Parts List *114*

11. Time/Temperature Display ***115***
Keeping Time *116*
Measuring Temperature *117*
ADC0831 Analog-to-digital Converter *118*
2x16 Serial LCD Module *120*
All Together Now *122*
Parts List *125*

12. Data-Logging Thermometer ***127***
Getting Peripherals on the Bus *128*
Different Bus Widths *128*
Programming for the Serial Bus *129*
A Synchronous-serial Thermometer *133*
BS2-based Temperature Logger *133*
Summary *141*
Parts List *141*

13. Worldwide Remote Control with C2TERM ***143***
Asynchronous Serial Communication *144*
Serial Timing and Framing *144*
Serial Parameters *145*
Bit Rate (Baud) *145*
Parity *145*
Data Bits *146*
Stop Bits *146*
A Serial Frame *147*
RS-232 Serial Signals *147*
Serial Communication by Modem *149*
X-10 Appliance Control *150*
C2TERM *153*

Initial X-10 checkout *153*
Modem Checkout *153*
Display and Button Checkout *155*
Complete C2TERM Application *158*
Going Further *164*
Parts List *165*

14. Short-Range Sonar ***167***
Sonar Principles *168*
Frequency and Wavelength *168*
The Sonar Circuitry *169*
Construction Notes *173*
The Sonar Program *173*
Just for Fun--the "Sonamin" *177*
Going Further *177*
Parts List *178*
Other Components *179*

15. Network Terminal with Keypad and Display ***181***
Alphanumeric LCD Modules *182*
Cursor Positioning *185*
Keypad Interface *186*
Stand-alone LCD/keypad demo *187*
RS-485 Networking *194*
RS-485 Interface *195*
Limitations of the Demo Application *196*
The Network Terminal *196*
Parts List *207*

APPENDICES

A. BASIC Stamp Quick Reference Guides ***209***
BASIC Stamp 1 Language Reference *210*
Program Memory (EEPROM) *210*
Data Memory (RAM) *211*
Input/Output (I/O) *212*
Math and Logic (Let) *212*
Instruction Summary *212*
BASIC Stamp 2 Language Reference *218*
Program Memory (EEPROM) *219*
Data Memory (RAM) *220*
Input/Output (I/O) *221*
Math and Logic *222*
Instruction Summary *223*
Numeric Conversion Options for Serin *228*
String Collection and Sequence Matching Options for Serin *228*
Options for Serout *228*

B. Numbering Systems, Integer Math, and Boolean Logic ***231***
Numbering Systems *232*
Digits, Weights, and Significance *234*

Numbers as Text and Text as Numbers *235*
Math with Fixed-size Integers *236*
Negative Numbers *240*
Boolean Logic *242*
So what? *243*
Summary *244*

C. Electronic Calculations and Stamp-Related Circuits ***245***
Ohm's Law calculations *246*
Resistances in Series and Parallel *246*
Resistances in Series *246*
Resistances in Parallel *247*
Rules of Thumb and Shortcuts *247*
Calculations with Rtotal *247*
Circuits with Resistors in Series and Parallel *248*
Series Resistors as a Voltage Divider *248*
Potentiometers as Adjustable Voltage Dividers *249*
Digital Switch Input *250*
Switches in the Real World *251*
Why are Pullups Preferred? *251*
LED Output *252*
Switching Bigger Loads with Transistors *252*
Calculating Resistor-capacitor (RC) Timing *254*
Using an External Voltage Regulator *256*

D. Bug-Hunting Guide ***259***

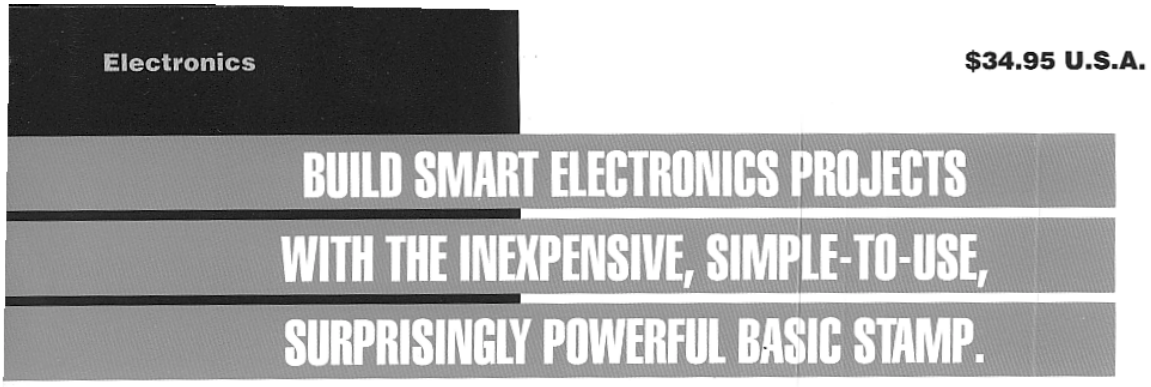
E. Sources for Electronic Components ***263***
Component Sources *264*

F. Suggested Reading ***267***

G. Glossary ***271***

Index *281*

Jameco Part number 154667



If you want to take advantage of the popular PIC Microcontroller for your electronics projects, but are intimidated by the programming involved, your worries are over.

This guide gives you a comprehensive tutorial on the easy-to-use BASIC Stamp single-board computer, which runs a PIC Microcontroller, and doesn't require you to do any assembly language programming. Written by the original author of the widely read "Stamp Applications" column for Nuts & Volts magazine, *Programming and Customizing the BASIC Stamp Computer* offers you:

- A primer on basic electronics--including reading schematics, identifying components, and constructing prototypes.
- Thorough yet accessible coverage of both BASIC Stamp I and II--from reading and understanding BASIC programs, to PBASIC toolboxes, to detailed applications.
- BASIC Stamp Quick Reference Guide
- 12 complete projects that demonstrate various BASIC Stamp applications and allow you to put your new knowledge to work.
- An accompanying CD that provides all the software tools you need to begin developing PIC applications on your own.

With the range of skills you'll develop using this guide, you'll see why it can be easier to build sophisticated projects with microcontrollers than with conventional electronic parts--and even more fun!
